

# Multiple Stores Solution Architecture

## What is Multiple Stores Solution Architecture ?

Growth comes with responsibility and the ability to sustain over a longer period of time. When brands are growing from 1 store to 5 to 50 and many more multi-outlets, then the scale will have to be managed efficiently. It becomes important for the brands to consistently deliver on customer promise by maintaining the quality of their services and products. With ELEGRA Apps software for multi-outlet and franchise retail chain, production, and warehouse the brands achieve:

# Advantages and Features

- **Management of cost of production**
- **Run daily production reports in minutes**
- **Issue dispatch notes**
- **Run outlet wise reports**
- **Know purchase order received versus dispatch**
- **Control your raw material**

## Master Data Management

Complete data centralization allows you to store data related to inventory, category, tax, price, suppliers, customers, employees etc. In addition, you can easily merge, purge, correct and synchronize the data as required. Extensive category classification provides insight into categories that are fast selling, slow moving, margin creators, loss leaders, etc. Further, you can drill down to the SKU level for each category Supports multiple SKU types including standard, serialized, kit, assembly, bulk, re-pack, etc.

## Store Management

Configure business process to suit your business needs - item scanned, item discounts, bill discounts, price levels, rate selection, stock selection, customer details selection, multiple tender types etc; all from a central location. For each tender, specify rules related to bill amount limit, service charges applicable, denomination details required etc

## Offers & Promotions

Extend and customize promotions module as the per your business needs. Create promotion family and define rules for a promotion or a set of promotions for a specific product or category of products. Track your promotions impact through reports

## Warehouse Management

Manage multiple warehouses based on location and convenience through automatic stock selection from warehouse based on different parameters. Track inventory movement right from indent requests to stock dispatch at warehouse to item receipt at various outlets. In addition, monitor stock in-transit between outlets to the last cartel and avoid meaningless reordering. Auto replenishment based on preset levels not only reduces out-of-stock scenarios, but also assures smooth operation of supply chain.

## Security

Centralized Control of all the stores - for all roles & users. Generate Audit report of all operations, in addition to catching of exceptions. Generate security reports at the HO level such as item void, bill void, aborted bill attempts, etc.
